

A solution to retail, wholesale and distribution industry

getset | **erp**

Sell more + Stock less
=
Increase margin

Eliminate co-ordination problems across the supply chain (blue-whip effect)

“ **Sell more + Stock less = Increase margin.**
Eliminate co-ordination problems across the chain (blue-whip effect) ”

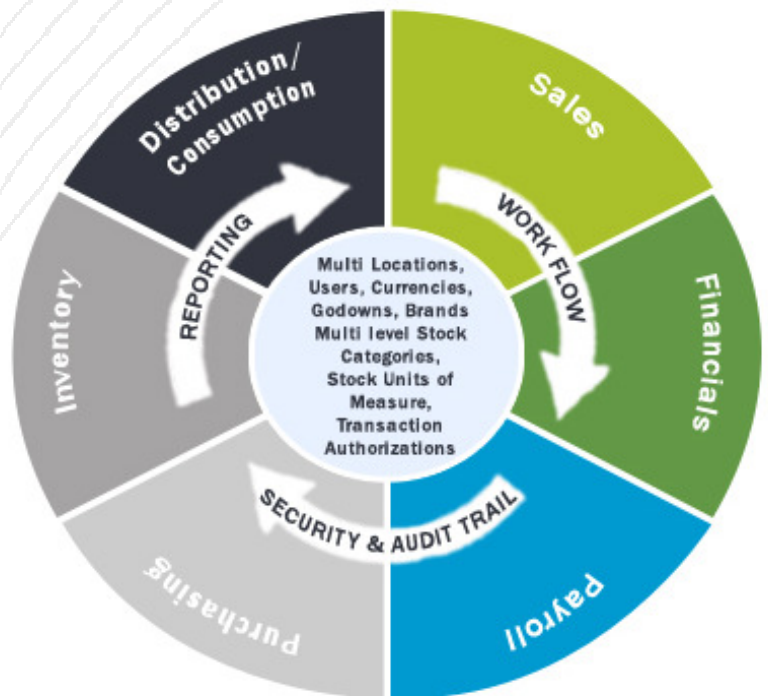

Sometimes, best intentions are not enough. Today’s competitive environment demands real-time data co-ordination and communication among stores, business units and corporate offices. For many SMBs/SMEs, trying to capture maximum revenue and keep inventory exposure at low is like a game of darts – it is hard to hit the target.

The scale and growth of your enterprise has alone made critical for to have a well-integrated IT roadmap in place that can support your challenging business demands – real-time information, streamlining, integrating and connecting every area from merchandising and supply chain to customers and stores.

GetSet ERP solution provides you with a consistent, comprehensive overview of the information relevant to end-to-end commerce transactions. This gives you a solid foundation of data for managing your business and contributes to a significant increase in profitability. GetSet ERP has many must-to-have capabilities which you will not find in any other off-the-self ERP applications.

GetSet ERP is a modular suit of applications. Each module within the ERP is an effective stand-alone solution. However, the ERP is much more than the sum of its parts. It relies on the power of integration and the high performance functionality of individually-strong solutions.

GetSet ERP can be used in many scenarios: on one computer or on local area network (LAN) or on wide area network (WAN). It shares a single, unified technology platform based on a service-oriented architecture and business process modeling. This flexible and adaptive architecture allows you to change business processes as circumstances or customers dictate.

“ *At GetSet, we understand your challenges and as we are the developers of GetSet ERP application we have complete product knowledge to meet your customization needs that can maximize efficiencies across your business chain quickly and easily.* ”

Key Challenges, Capabilities and Benefits

“ Following are some specific challenges we hear from customers in the verticals of Retail, Wholesale and Distribution – and how we can help you to meet them.”

Challenges	Capabilities	Benefits
We miss sales opportunities because we lack visibility to available inventory. And lack of visibility causes service failures and fire fighting that could be avoided. Customer wants item that's out of stock in a store.	GetSet Stock Summary gives you real-time visibility of your inventory across the network of storage locations, and pending purchase and sales orders – and even extend this visibility to customers and suppliers	<ul style="list-style-type: none"> ■ Helps you save-the-sale. ■ Ensures accurate In Stock quantities. ■ Avoids customer disappointments. ■ Minimize customer time waiting to find out about inventory availability. ■ Minimizes shipping/transfer costs. ■ Optimizes inventory utilization.
We are not gaining increased purchasing power from our procurements because we can't consolidate our orders.	GetSet provides a function of aggregation-for-buying-power and separation-for-delivery	<ul style="list-style-type: none"> ■ Quick and easy consolidation of requisitions or indents and prepare purchase orders. ■ Saves purchasing manager's valuable time and brings accuracy.
System users want to reduce double entry and use Once-only-data-entry feature	Master data and Transaction documents can be created at one place and be synced for use at many other places. Possible to memorize the transaction templates and reuse them.	<ul style="list-style-type: none"> ■ Data-entry time and errors in creation of Transactions can be avoided ■ Always you can see One System of Record. ■ Helps you to avoid most of reconciliation related issues – saves time and cost.
Purchase managers like to see Inventory Insight and get alerts	Set reorder level and get automatic alerts to help you keep up with the demand.	<ul style="list-style-type: none"> ■ Ensures to place an order before available item is out-of-stock. ■ Minimizes shipping/transfer costs. ■ Improves communication and co-ordination.
Financial Controller wants to get FIFO based cost valuation of Inventory	Allows issue stock on First In and First Out principle basis only.	<ul style="list-style-type: none"> ■ Helps to comply with International Financial Reporting Standards (full or for SMEs). ■ Helps to ascertain at correct inter-departmental-transfer costs and cost of goods sold.
System users wants to buy in one UoM and sell or distribute in many other UoMs	Allows you to record may buy the same item in one unit of measure, stock it in another, and sell it in yet another.	<ul style="list-style-type: none"> ■ It helps you to avoid costly mistakes and streamline your workflows.
System users expect application should unleash the hidden power of data	Executive dashboards give you an insight how your business data says. It will help you to take right decisions in the right time.	<ul style="list-style-type: none"> ■ Reduce time to get right information. ■ Dashboards pulls out the critical information from the data.
Set Custom Pricing Levels	GetSet ERP allows you to Create multiple pricing levels and link a price level to any customer.	<ul style="list-style-type: none"> ■ Easily manage complex pricing models. ■ Necessary information is available to set prices all at one place.
Works on different Operating Systems	Works on Windows, Linux and Mac.	<ul style="list-style-type: none"> ■ You have flexibility to move application from one operating system to another.

- Data synchronization between Central Store and Sub locations
- Export to Excel and Print PDF documents of all Transactions & Reports
- Close Order Transactions - Back Lashing
- FIFO Methodology for Stock valuation
- Email Engine (Send transaction documents thru emails) with Customizable Email templates
- Support for Digital Signatures
- Single Sign On for Multiple Instances/Sites
- Barcode Label Printing & Barcode System Integration
- Complete Reference of Help Documents
- Standard Support
- Database Backup Scheduler

Integrate?

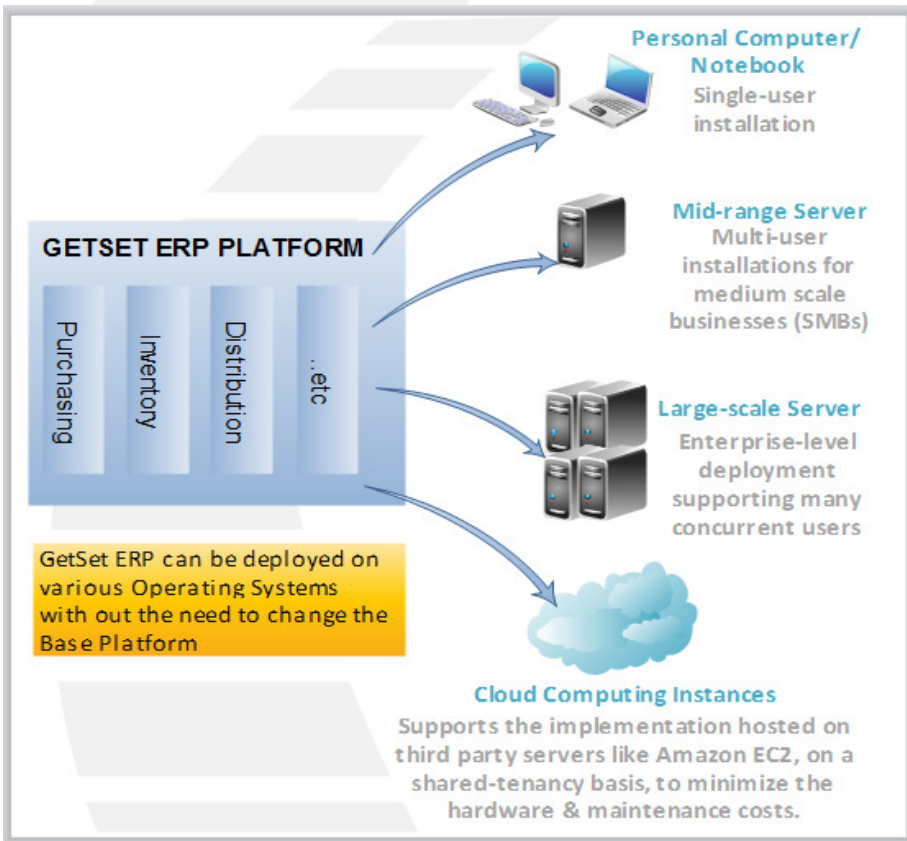

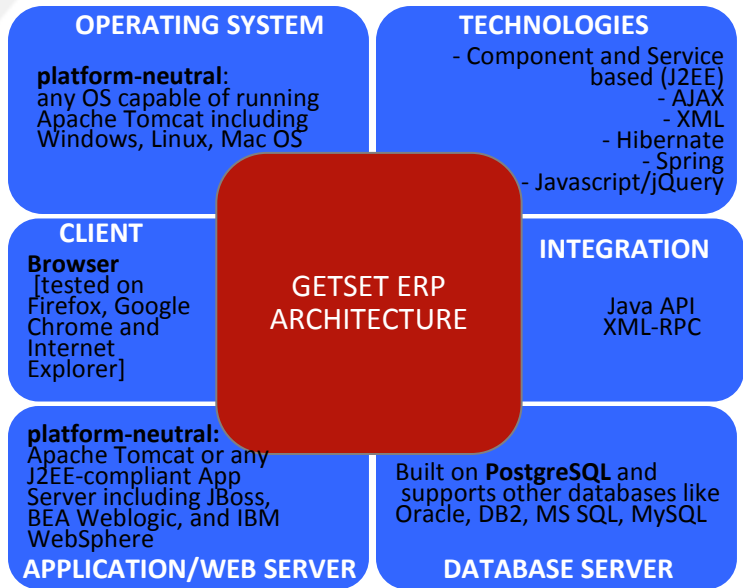

We can integrate GetSet ERP with your Accounting or CRM software or e-Commerce website or with any other database.

Technical Architecture and Scalability

“ *GetSet ERP is a J2EE application with a state-of-the-art architecture and virtually unlimited scalability.* ”

Architecture examines how products are built, how they are deployed, how they can be customized, how they can be extended, and how they can be integrated with external applications.

While you should select a ERP product primarily based on its functionality, its architecture should also have a significant influence on your decision.

Scalability examines how well a product adapts to different demands in terms of

- # concurrent users.
- # data objects (or data records).
- # transactions per time unit, etc.

At one end of the scale you have a road warrior (e.g. a sales rep visiting (potential) customers)

At the other end of the scale you have a global enterprise with hundreds of concurrent users across your business locations/units.

Availability / Fault Tolerance / Reliability

GetSet ERP is a well-designed industrial-strength J2EE application and well suited for 24x7 operations.

Why GetSet and Our Offerings

“ You dream, we’ll do the rest. Partnership with us gives our customer like you access to our vast domain and technical expertise and best practices. ”

GetSet ERP solution – not number one, but preferred one.

We have developed ERP solution based, mainly, on three key principles – easy to use, less TCO and quick implementation that enable our customers to benefit from the best-of-breed solutions. Our CoEs share knowledge across engagements, create best practices and solutions accelerators, and guide our implementation teams across the project life-cycle.

Domain Expertise

GetSet’s founders are former senior executives and a small team of professionals from top-class institutions in the world like CFA, CIMA, CISA, ICAI, and NIT. Our domain and technical expertise and years of experience in business functions and in deploying IT solutions will help our customers. We have built a network of subject-matter experts who are aspire to solve customer’s business process challenges.

Reduced Implementation Time

Our domain expertise and experience in handling end-to-end implementations have enabled us to create, and keep ready, pre-configured assets and technical accelerators that accelerate implementation, by reducing development time for activities, such as data migration, master data setup, middleware interfacing, etc.

Our Offerings

We provide GetSet ERP solution and end-to-end implementation for complete business process integration. Our ERP services include:

Consultancy Services

Carry out a current system study and create the IT road map that meets your business objectives.

Integration Services

Identify gaps and integrate solutions with the existing system, including data integration for consistency, and go-to-live support for quick and de-risked implementation.

Product and Custom Development

Roll out GetSet ERP implementation plan and tweak the product to fit into your needs.

Upgrade

Assess upgrade and impact analysis to minimize risks and carry out the upgrade program, based on our technical and functional assessment.

Maintenance and Custom Support

Analyze and resolve issues by deploying fixes, making minor enhancements for smooth day-to-day operations.

Hosting

Support the implementation hosted on third-party servers like Amazon EC2, on a shared-tenancy basis, to minimize maintenance cost.

Through our vast domain and technical expertise, we help you with a study of your existing systems, build a business and IT architecture roadmap, evaluate and recommend solutions that fit your needs and finally implement and support the application.
